

The World's Most Advanced Hand Sanitizer Provides Long-Lasting Protection

- 24-Hour protective Shield
- Family-Friendly
- Waterproof
- Alcohol-Free
- No Nasty Chemicals
- Kills 99.9% of Germs

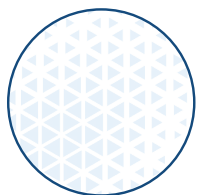

What is Novālent®?

- A leading US biotechnology engineering company.
- A groundbreaking environmentally-friendly technology which provides ongoing protection against germs.
- Based on a non-toxic monomolecular layer that continuously protects against harmful germs after application.
- This technology is used in Novālent® Shield+, a unique alcohol-free hand sanitizer which provides protection against ongoing harmful germs after application.
- Visit us at www.novalent.com for additional information.

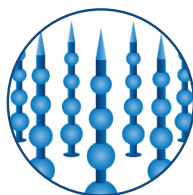

How Novālent® Shield+ works?

Novālent® Shield+ works by forming an invisible, non-irritating, waterproof microbiostatic layer that inhibits the growth of bacteria.

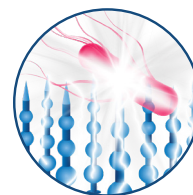

1. In the morning, apply a single squeeze to your hands and spread evenly, allow to dry.
2. Once applied, Novālent® Shield+ creates a positively-charged layer on the skin, which breaks down and kills microbes that you come in contact with.
3. Novālent® Shield+ is long-lasting, and won't come off when you wash your hands (only as your skin sheds).

Technology bonds to skin immediately after application

Biostatic positively-charged shield of carbon atoms appears

Shield continuously ruptures negatively charged microbes that come in contact with it
